Prerequisites

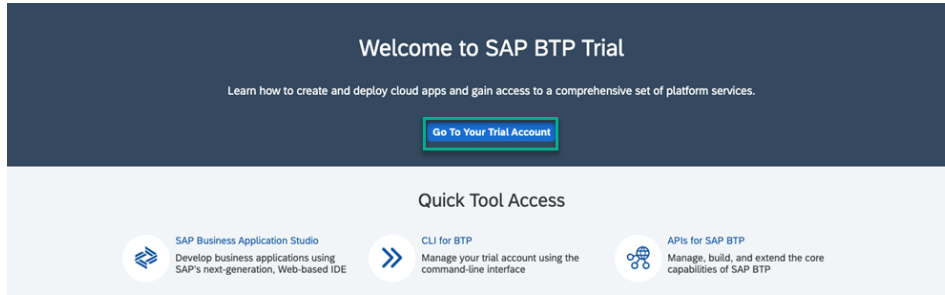

- If you want to use a trial environment, you need to first register it. You can register to a trial account using this link: [Create a trial account](#).
- If you're using a production environment, you should have a subaccount configured. If you don't have a configured subaccount, refer to this topic: [Initial Setup](#).

In this group of tutorials our goal is to create a launchpad site using the SAP Launchpad service. But before we can do this, there are some steps you'll need to do in the SAP BTP cockpit.

1 Step 1: Subscribe to the SAP Launchpad service

Before you can access the SAP Launchpad service, you first need to subscribe to it.

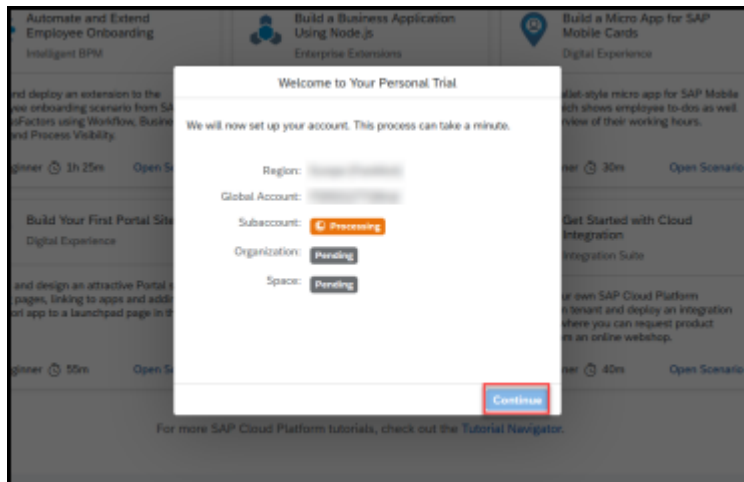

1. [Log onto SAP BTP](#) and click **Go To Your Trial Account**.

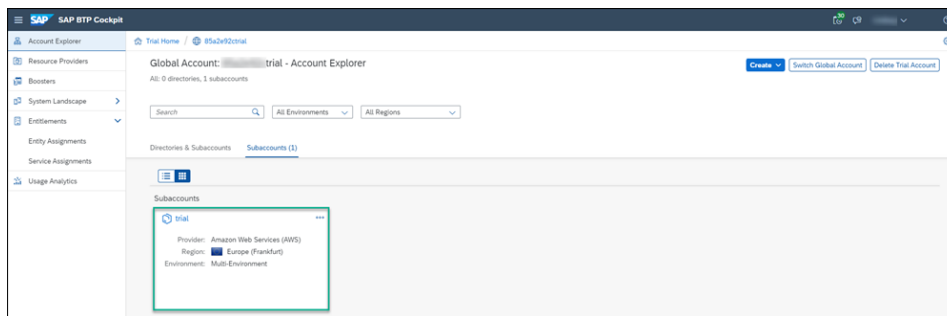

If this is your first time accessing your trial account, you'll have to configure your account by choosing a region (select the region closest to you). Your user profile will be set up for you automatically.

Wait until your account is set up and ready to go. Your global account, your subaccount, your organization, and your space are launched. This may take a couple of minutes.

2. Click **Continue** if you get this popup.

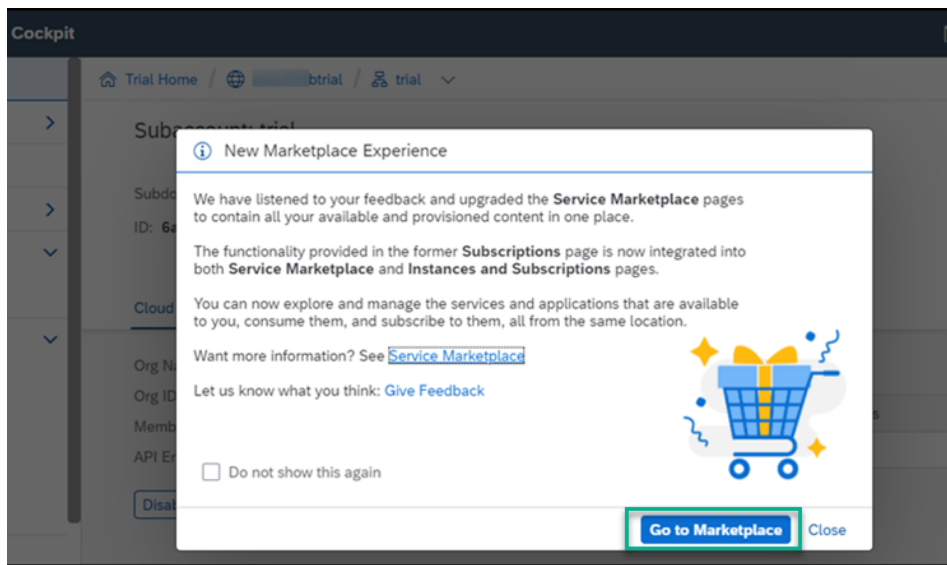

3. Click the **trial** tile to navigate to your trial subaccount in the SAP BTP cockpit. If you're using your own subaccount, you can select it instead.

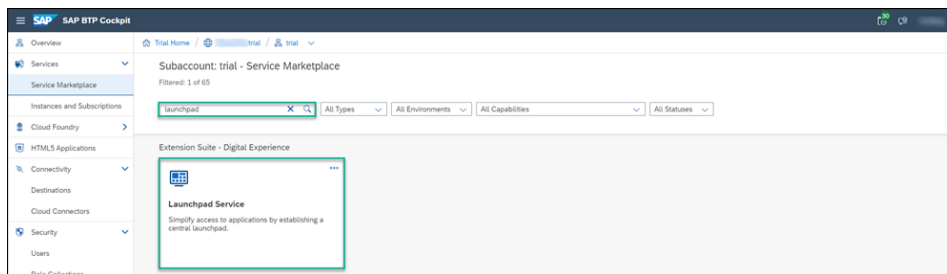

4. Click **Go to Marketplace**. Alternatively, you can navigate to the service marketplace by clicking on the **Services** menu item and selecting **Service Marketplace**.

The Service Marketplace provides you access to all services and applications that you can access from the SAP BTP cockpit.

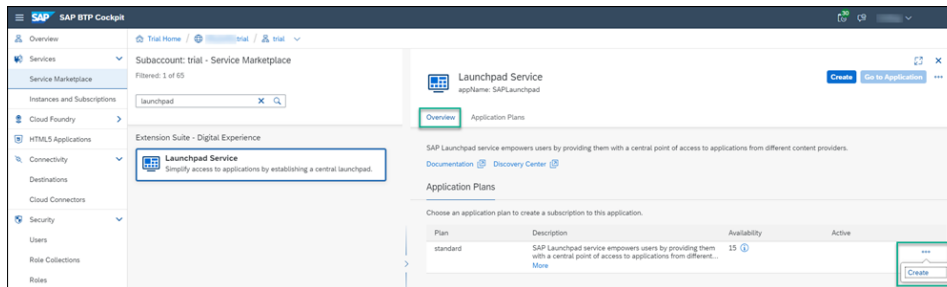

5. Enter **launchpad** in the search box and click the **Launchpad Service** tile.

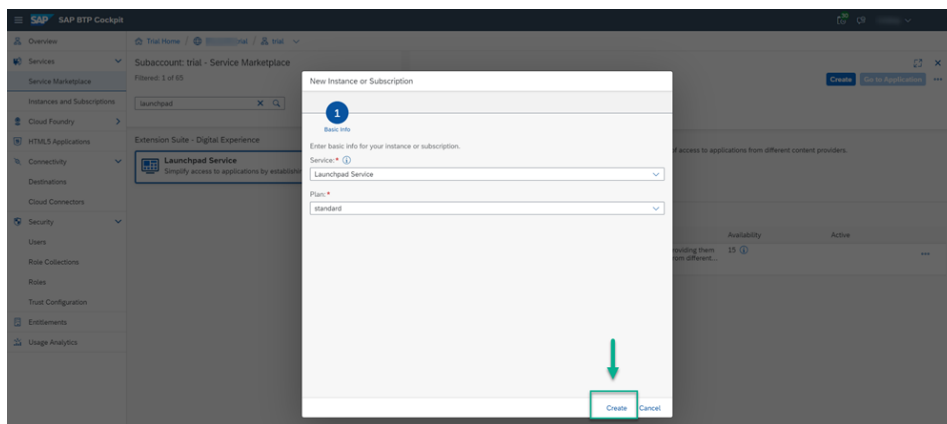

If you aren't able to find the **Launchpad Service** tile, or if you can't access it, you may be using an older trial account. You can easily add it to your account via the **Entitlements** area. Click **Configure Entitlements** and then **Add Service Plans**. Then search for **launchpad**, check the standard plan, and click **Add 1 Service Plan**. Don't forget to save in the next screen.

6. From the **Overview** tab on the right, click the Actions icon (...) and select **Create** in the opened menu to create a new subscription.

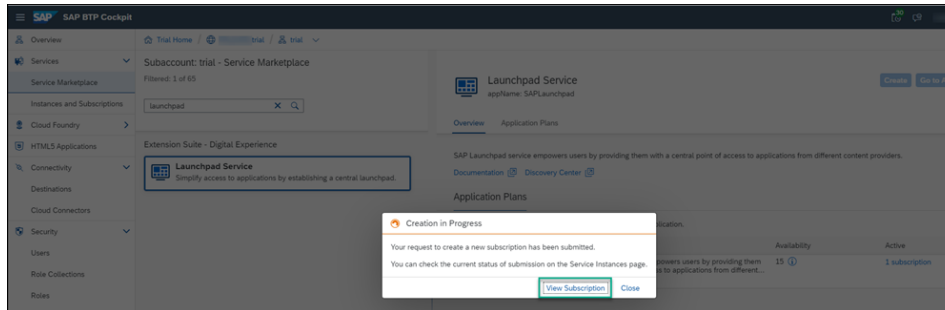

You can also use the **Create** button at the top right of the screen.

7. In the **New Instance or Subscription** dialog box that opens, leave the basic information that appears there and click **Create**.

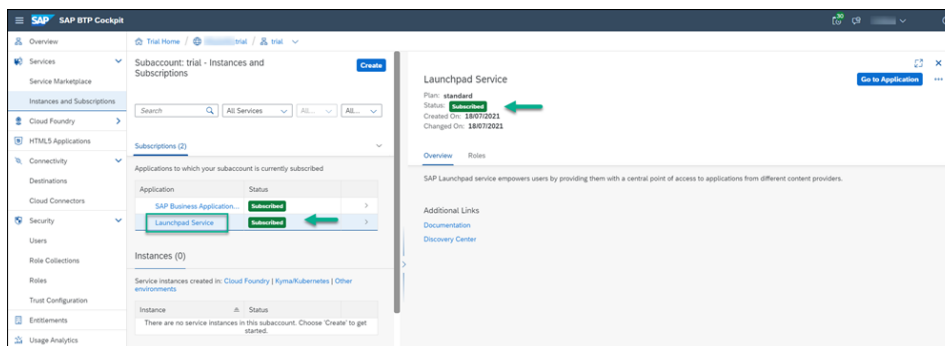

8. You'll get confirmation that your subscription is being created. Click **View Subscription**.

This step will redirect you to the **Services -> Instances and Subscriptions** screen. This screen provides you with an overview of all services and applications that are currently active.

- From the **Instances and Subscriptions** screen, under the **Subscriptions** tab or in the **Overview** section, you'll see that you are subscribed to the **Launchpad Service**.

2

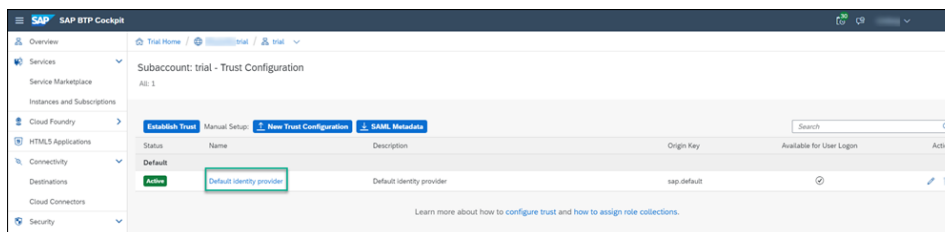

Step 2: Add yourself to the Launchpad_Admin role

To be able to access the SAP Launchpad service, users must be assigned to the **Launchpad_Admin** role. In this step, you'll assign yourself to this role so that you can access the service and create a launchpad site.

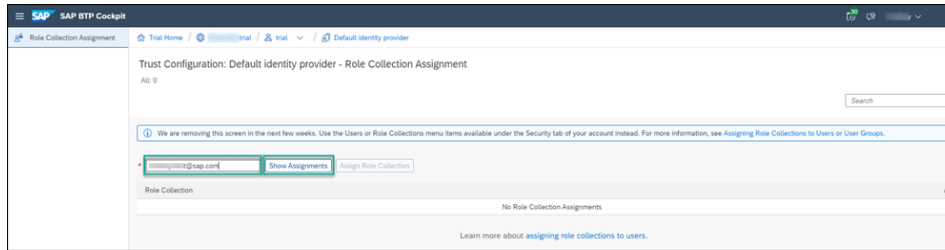

1. Click **Security > Trust Configuration** from the side menu.

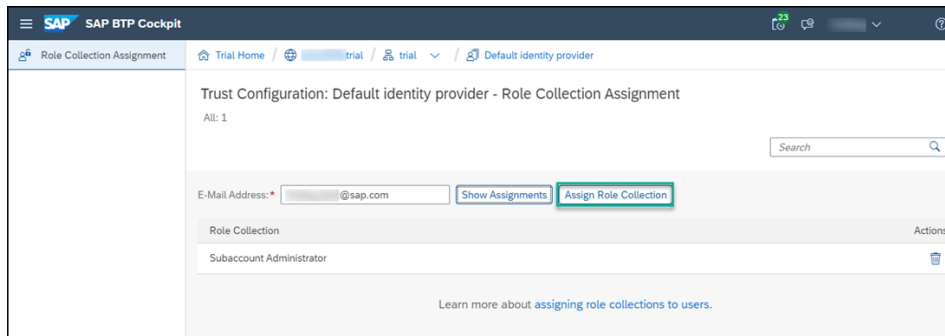

2. Click **Default identity provider** to select the SAP ID Service.

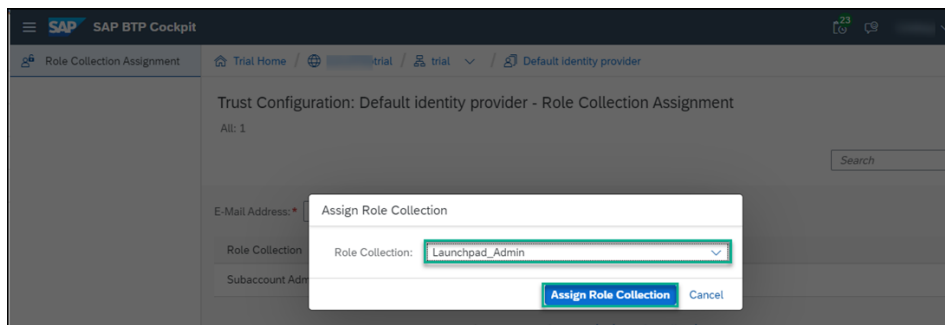

3. Enter your email address and then click **Show Assignments**.

4. Click **Assign Role Collection**.

5. Scroll down until you find the **Launchpad_Admin** role, select it, and then click **Assign Role Collection**.

You have now been assigned to the **Launchpad_Admin** role and you can access the SAP Launchpad service and carry out all your admin tasks.

 **Done**

3 Step 3: Access the SAP Launchpad service

You are now ready to access the SAP Launchpad service.

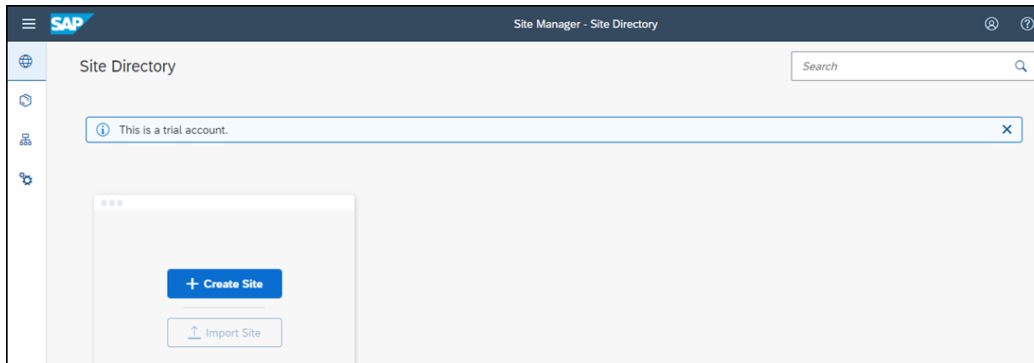

1. Use the breadcrumbs to open your trial account.

2. Click **Instances and Subscriptions** from the side panel, click the **Subscriptions** tab, click the Actions icon (...) on the right, and select **Go to Application**.

The SAP Launchpad service opens with the Site Directory in focus. This is where you'll create and manage your launchpad sites.

Which role do you need in order to carry out admin tasks in the SAP Launchpad service?

- ☐ Administrator
- ☐ Developer
- ☐ Tenant_Admin
- ☐ Launchpad_Admin
