

Upload/download File in SAP UI5 Application using Gateway

📅 November 14, 2018 (<http://www.sapspot.com/upload-download-file-in-sap-ui5-application-using-gateway/>) 👤 webadmin
(<http://www.sapspot.com/author/webadmin/>)

Please find below step by step how you can upload and download file.

Please note that i am implementing this on Central Hub Gateway Deployment so will be explaining this in two sections

Section I: Back End

Step-1 : Create Table

First I created a table on back-end system that will contain the uploaded files.you can add many fields you want but your table must contain Filename,Value and mimetype.

Field	Key	Initi...	Data element	Data Type	Length	Decim...	Short Description
<u>MANDT</u>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<u>MANDT</u>	CLNT	3	0	Client
<u>WORKORDER</u>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<u>ZWORKORDER</u>	CHAR	12	0	WorkOrder No.
<u>FILENAME</u>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<u>CHAR100</u>	CHAR	100	0	Character 100
<u>VALUE</u>	<input type="checkbox"/>	<input type="checkbox"/>	<u>XSTRINGVAL</u>	RAWSTRING	0	0	XString
<u>MIMETYPE</u>	<input type="checkbox"/>	<input type="checkbox"/>	<u>CHAR100</u>	CHAR	100	0	Character 100
<u>DATESTAMP</u>	<input type="checkbox"/>	<input type="checkbox"/>	<u>DATS</u>	DATS	8	0	Field of type DATS
<u>TIME</u>	<input type="checkbox"/>	<input type="checkbox"/>	<u>UZEIT</u>	TIMS	6	0	Time

after creating table we developed three Function Modules.

Step-2: Function Modules

Please note all functions are RFC Enabled.

1. Upload

In this function you will import following parameters and store values in table.

Function module

FILE_UPLOAD

Active

Attributes

Import

Export

Changing

Tables

Exceptions

Source code

Parameter Name	Typing	Associated Type	Default value	Opt...	Pas...	Short text	Lon...
IM_MEDIA_RESOURCE	TYPE	XSTRINGVAL		<input type="checkbox"/>	<input checked="" type="checkbox"/>	XString	
IM_MIME_TYPE	TYPE	CHAR100		<input type="checkbox"/>	<input checked="" type="checkbox"/>	Character 100	
IM_WORKORDER	TYPE	ZWORKORDER		<input type="checkbox"/>	<input checked="" type="checkbox"/>	WorkOrder No.	
IM_FILENAME	TYPE	CHAR100		<input type="checkbox"/>	<input checked="" type="checkbox"/>	Character 100	

DATA: TEMP_WO LIKE ZBM_WORKORDERAPP-WORKORDER.

DATA: WA_UPLOAD TYPE ZBM_FILEUPLOAD.

* SELECT SINGLE WORKORDER INTO TEMP_WO FROM ZBM_WORKORDERAPP

* WHERE WORKORDER EQ IM_WORKORDER.

*

* CHECK TEMP_WO IS NOT INITIAL.

WA_UPLOAD-MANDT = SY-MANDT.

WA_UPLOAD-WORKORDER = IM_WORKORDER.

WA_UPLOAD-FILENAME = IM_FILENAME.

WA_UPLOAD-VALUE = IM_MEDIA_RESOURCE.

WA_UPLOAD-MIMETYPE = IM_MIME_TYPE.

WA_UPLOAD-DATESTAMP = SY-DATUM.

WA_UPLOAD-TIME = SY-UZEIT.

INSERT INTO ZBM_FILEUPLOAD VALUES WA_UPLOAD.

IF SY-SUBRC <> 0.

RAISE DATA_NOT_INSERTED.

ENDIF.

ENDFUNCTION.

please note this function module is for Create Odata service implementation

2. Get List of files

In my case user can add multiple files for specific workorder. To implement this functionality i created function module which returns table with file name and file type.

Function module

[REDACTED]_GET_FILENAMES

Active

Attributes

Import

Export

Changing

Tables

Exceptions

Source code

Parameter Name	Typing	Associated Type	Optional	Short text	Long Text
INFO_TAB	LIKE	ZBM_FILENAMES	<input type="checkbox"/>	MrkWO - Work Order File Attachment Table	

please note this function module is for GetEntitySet Odata service implementation

3. Download

In this function i pass two parameters and get related file.

Function module

_FILE_DOWNLOAD

Active

Attributes

Import

Export

Changing

Tables

Exceptions

Source code

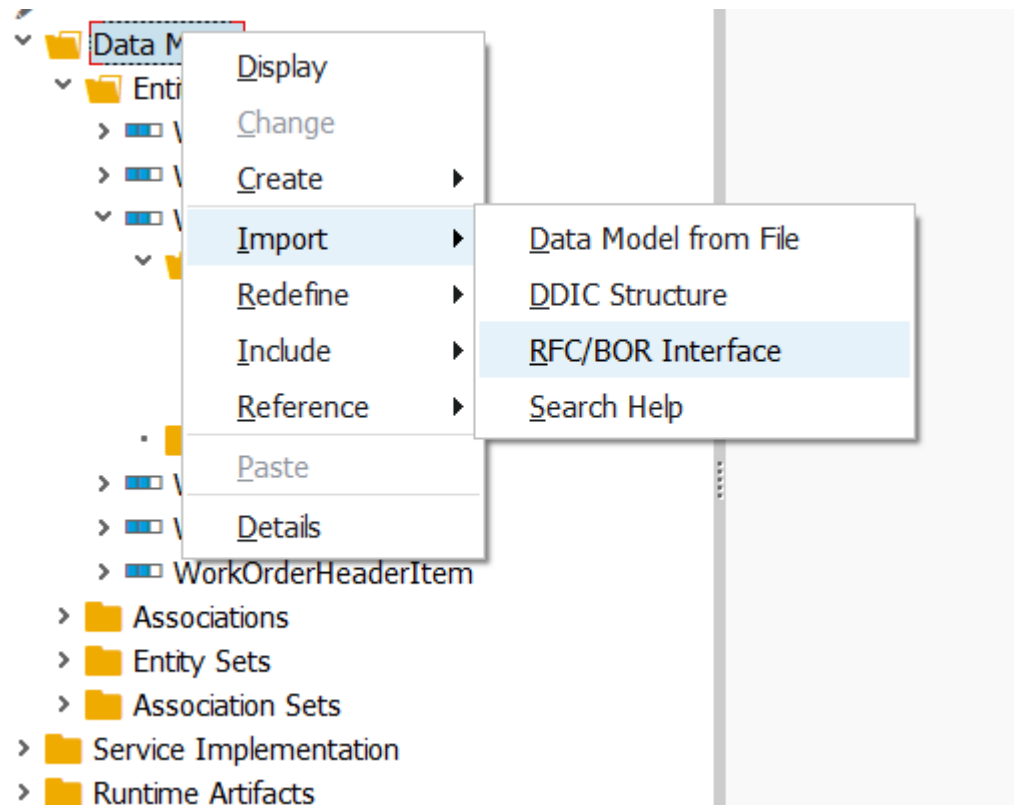

Parameter Name	Typing	Associated Type	Pass Value	Short text	Long Text
EX_MEDIA_RESOURCE	TYPE	XSTRINGVAL	<input checked="" type="checkbox"/>	XString	
EX_MIME_TYPE	TYPE	CHAR100	<input checked="" type="checkbox"/>	Character 100	
EX_FILENAME	TYPE	CHAR100	<input checked="" type="checkbox"/>	Character 100	
EX_DATESTAMP	TYPE	DATE	<input checked="" type="checkbox"/>	Date in CHAR format	
EX_TIME	TYPE	UZEIT	<input checked="" type="checkbox"/>	Time	
			<input type="checkbox"/>		

please note this function module is for GetEntity Odata service implementation

Section II: Front-End SAP Gateway

Step-1: Service Creation

I have created a project in SEGW and an entity type based upload function

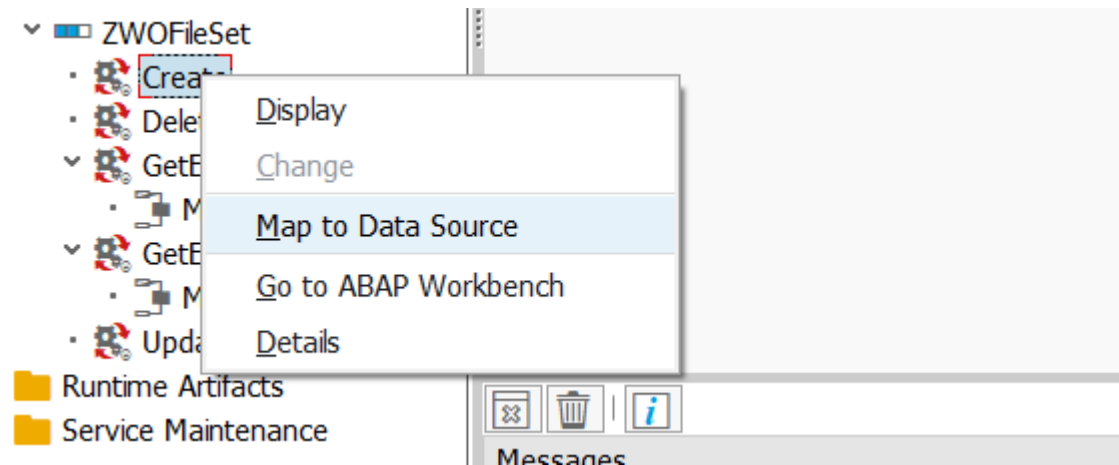

following properties were created.

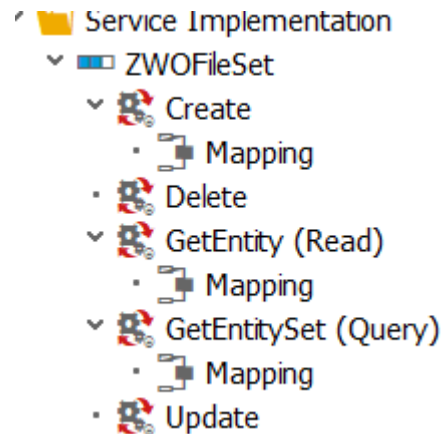

Properties																	
Name	Is Key	Edm Core Type	Prec.	Scale	Max	Unit	Property Name	Creat...	Updat...	Sorta...	Nullab...	Fit.	Label	La...	Complex Type Name	ABAP Field Name	AB... Semantics
ImFilename	<input checked="" type="checkbox"/>	Edm.String	0	0	100			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Character 100	T		IM_FILENAME	<input type="checkbox"/>
ImMediaResource	<input type="checkbox"/>	Edm.Binary	0	0	0			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Binary String	T		IM_MEDIA_RESOUR...	<input type="checkbox"/>
ImMimeType	<input type="checkbox"/>	Edm.String	0	0	100			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Character 100	T		IM_MIME_TYPE	<input type="checkbox"/>
ImWorkorder	<input checked="" type="checkbox"/>	Edm.String	0	0	12			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	WorkOrder No.	T		IM_WORKORDER	<input type="checkbox"/>

Step-2 : Service Implementation

we will use mapping

we have implement following services

For Create we used upload function,

Mapping of Operation Create for ZWOFFileSet					Data Source Parameter	
Pr...	Entity Set property	Constant Value	M...	Data Source Parameter		
	ImFilename		➡	IM_FILENAME	ZAN_MRKWO_FILE_UPLOAD	
	ImMediaResource		➡	IM_MEDIA_RESOURCE	IM_FILENAME	
	ImMimeType		➡	IM_MIME_TYPE	IM_MEDIA_RESOURCE	
	ImWorkorder		➡	IM_WORKORDER	IM_MIME_TYPE	
					IM_WORKORDER	

for Get Entity we used download

Mapping of Operation GetEntity (Read) for ZWOFileSet

Pr...	Entity Set property	Constant Value	M...	Data Source Parameter
	ImFilename		←	EX_FILENAME
	ImFilename		→	IM_FILENAME
	ImMediaResource		←	EX_MEDIA_RESOURCE
	ImMimeType		←	EX_MIME_TYPE
	ImWorkorder		→	IM_WORKORDER

Data Source Parameter

- ▼ ZAN_MRKWO_FILE_DOWNLOAD
 - ▶ IM_FILENAME
 - ▶ IM_WORKORDER
 - ▶ EX_DATESTAMP
 - ▶ EX_FILENAME
 - ▶ EX_MEDIA_RESOURCE
 - ▶ EX_MIME_TYPE
 - ▶ EX_TIME

and for Get Entity Set we used Get file names function

Mapping of Operation GetEntitySet (Query) for ZWOFileSet

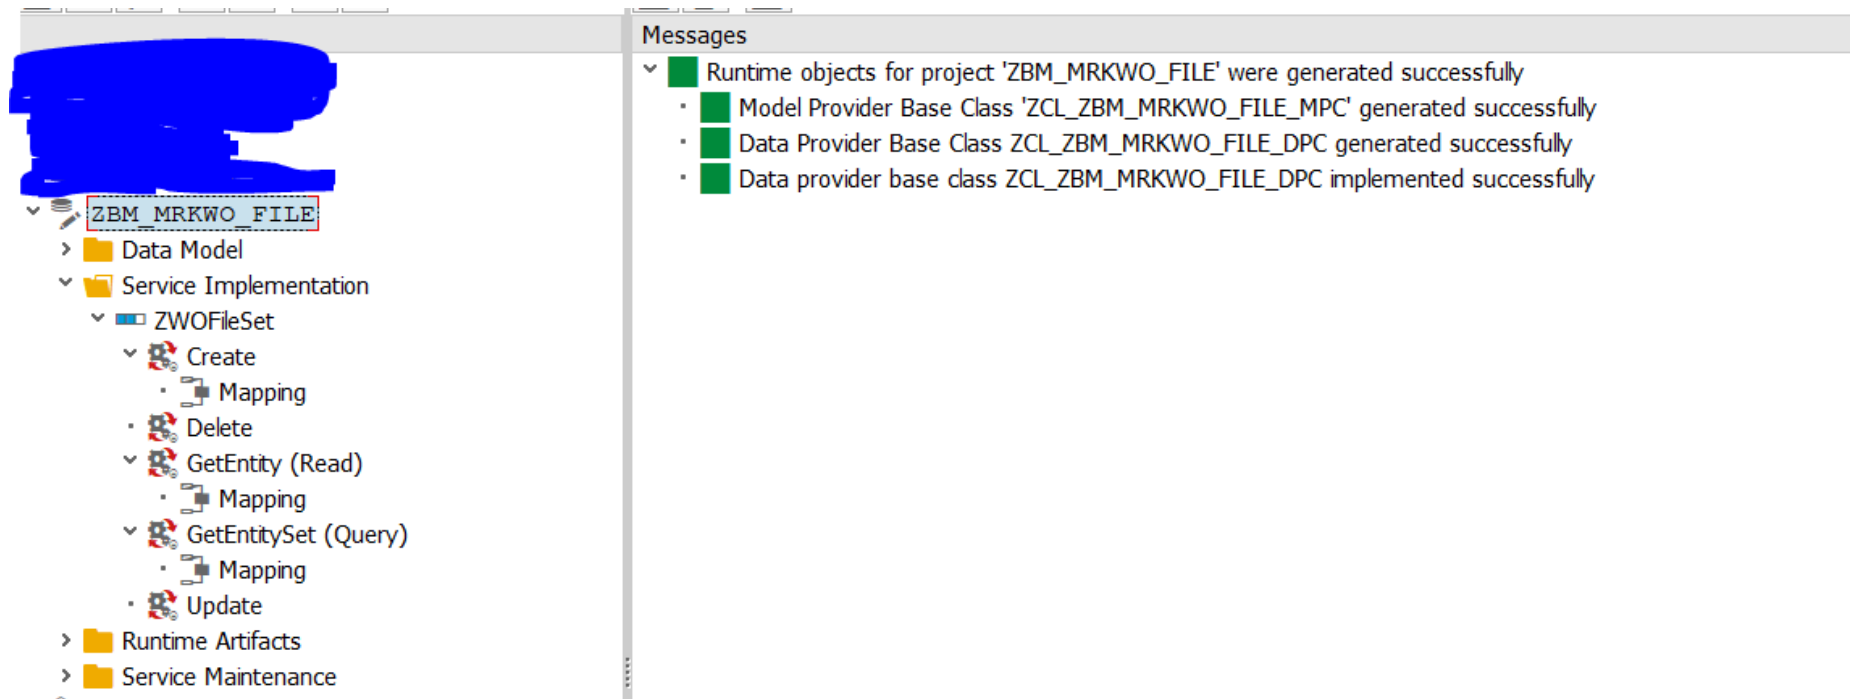

Pr...	Entity Set property	Constant Value	M...	Data Source Parameter
	ImFilename		←	INFO_TAB\FILENAME
	ImMimeType		←	INFO_TAB\MIMETYPE
	ImWorkorder		←	INFO_TAB\WORKORDER
	ImWorkorder		→	WORKORDER

Data Source Parameter

- ▼ ZAN_MRKWO_GET_FILENAMES
 - ▶ WORKORDER
 - ▼ INFO_TAB[]
 - ▶ WORKORDER
 - ▶ FILENAME
 - ▶ MIMETYPE

thats it !

lets generate.

So we have implemented odata service successfully.

Section III: WebIDE

In this section we will see we can use above service in UI5 application

In this Ist we will upload the file to back end system,and the we will download file using UI5 application.

Step-1: Upload file using file uploader.

I will be using file uploader component.

Upload Supporting File

Browse...Upload

*Only txt,docx,xlx,pdf,png File can be uploaded,

On upload i have implemented postFiletoBackend

```
postFileToBackend: function (workorderId, fileName, fileType, Content) {
    var itemString = "/ZW0FileSet/";
    var serviceURI = "XXXXXXXXXXXXXXXXXXXX";
    var oDataModel = new sap.ui.model.odata.v2.ODataModel(serviceURI);
    var payload = {
        "ImWorkorder": workorderId,
        "ImFilename": fileName,
        "ImMediaResource": btoa(Content),
        "ImMimeType": fileType
    };
    oDataModel.create(itemString, payload, {
        success: function () {
            sap.m.MessageBox.success("Success! ; file Uploaded created");
        }, {
            error: function (oError) {}
        }
    });
},
```

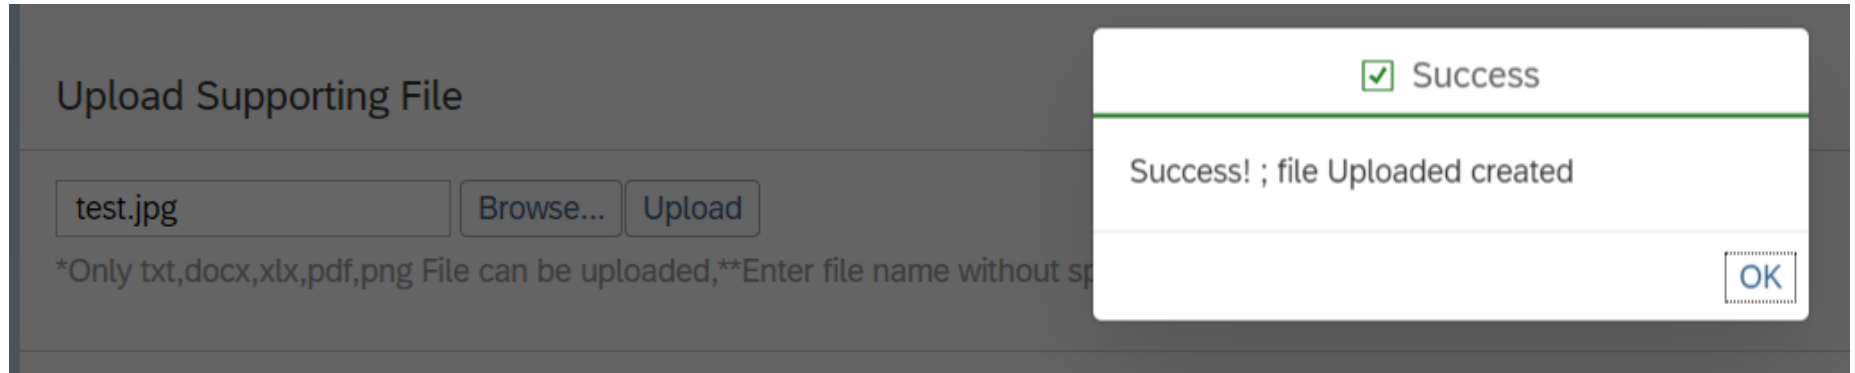

we have used JavaScript function btoa for encoding the file content

question arise from where filename,filetype and content come from.below is the code how get details from uploader.

```
onUpload: function (oEvent) {
    var oFileUpload = this.getView().byId("fileUploader");
    var domRef = oFileUpload.getFocusDomRef();
    var file = domRef.files[0];
    var that = this;
    this.fileName = file.name;
    this.fileType = file.type;
    var reader = new FileReader();
    reader.onload = function (e) {var vContent = e.currentTarget.result.replace("data:" + file.type + ";base64,", "");
    that.postFileToBackend(workorderId, that.fileName, that.fileType, vContent);
```

```
};  
reader.readAsDataURL(file);  
}
```

once the file uploaded you will get success message

Step-2: Download file

I didn't use upload collection. Instead of that i have just list down the file related to workorder using list object.

and by using get entity set we will get following view.

   
Supporting Files
create_stream.txt
sbo42sp3_bip_admin_en.pdf
test.jpg
workflowtext.html

Now i have implemented download function on click of row.

```

downloadFile: function (oEvent) {
    //This code was generated by the layout editor.
    var workorder = oEvent.getSource().getBindingContext().getProperty("Workorder");
    var filename = oEvent.getSource().getBindingContext().getProperty("Filename");
    // sap.m.MessageBox.success(workorder + "with " + filename);

    var itemString = "/ZWOFfileSet(ImFilename='" + filename + "',ImWorkorder='" + workorder + "')";
    var serviceURI = "XXXXXXXXXXXXXXXXXXXX";
    var oModelFile = new sap.ui.model.odata.v2.ODataModel(serviceURI);
    oModelFile.read(itemString, {
        success: function (odata, response) {
            var fName = odata.ImFilename;
            var fType=odata.ImMimeType;
            var fMres=atob(atob(odata.ImMediaResource));
            // sap.m.MessageBox.success("Success! ; file received with Name :"+fName+"with type :"+fType+" with
            if (fType === "text/plain") {

                sap.ui.core.util.File.save(fMres, fName.replace(".txt", ""), "txt", fType, "utf-8", true);
            } else {
                var byteNumbers = new Array(fMres.length);
                for (var i = 0; i < fMres.length; i++) {
                    byteNumbers[i] = fMres.charCodeAt(i);
                }
                var byteArray = new Uint8Array(byteNumbers);
                var blob = new Blob([byteArray], {
                    type: fType
                });
                var url = URL.createObjectURL(blob);
                window.open(url, '_blank');
            }
        },
        error: function (oError) {}
    });
}

```

I have tried to use sap.ui.core.util.File.save() function but only getting blank or corrupt file.only text file was working fine.

To achieve the goal i have used native JavaScript functionality by creating blob from the file “Value” and open the blob by using url.
